; Sequence 65 Application US/08663823B
; Patent No. 5972633:
GENERAL INFORMATION:
APPLICANT: Rothberg, Jonathan
APPLICANT: Deam, Michael
APPLICANT: Simpson, John
TITLE OF INVENTION: METHOD AND APPARATUS FOR IDENTIFYING,
TITLE OF INVENTION: MIHOUT SEQUENCING
TITLE OF INVENTION: WITHOUT SEQUENCING
NUMBER OF SEQUENCES:
ADDRESSE: Pennie and Edmonds LLP
STREET: 1155 Avenue of the Americas
CITY: New York
STATE: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

; Sequence 36, Application US/09569344
; Patent No. 6368802
; GENERAL INFORMATION:
APPLICANT: UNIVERSITY OF ROCHESTER
TITLE OF INVENTION: CIRCULAR DNA VECTORS FOR SYNTHESIS OF RNA AND DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NUMBER OF SEQUENCES: 72

Sequence 86, Application US/09231303

Patent No. 6395478

GENERAL INFORMATION:

APPLICANT: Nandabalan, Krishnan

APPLICANT: Nathberg, Jonathan

TITLE OF INVENTION: IDENTIFICATION AND COMPARISON OF PROTEIN-PROTEIN

TITLE OF INVENTION: IDENTIFICATION OF INHIBITORS OF THESE INTERACTIONS

FILE REPRENCE: 7934-087

CURRENT APPLICATION NUMBER: US/09/231,303

CURRENT FILING DATE: 1999-01-12

EARLIER APPLICATION NUMBER: 08/663,824

BALLIER PLICATION DATE: 1996-06-14

NUMBER OF SEQ ID NOS: 118

SOFTWARE: PATENTING DATE: 1996-06-14

NUMBER OF SEQ ID NOS: 118

SEQ ID NO 86

LENGTH: 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 87, Application US/09231303

Sequence 13, Application US/08196103A

Patent No. 5672472

GENERAL INFORMATION:

APPLICANT: Excker, David J.

APPLICANT: Bruice, Thomas A.

APPLICANT: Davis, Peter

APPLICANT: Hancack, Ronnie C.

APPLICANT: Watt, Jaqueline

TITLE OF INVENTION: Synthetic Unrandomization of Oligomer

TITLE OF INVENTION: Synthetic Unrandomization of Oligomer

TITLE OF INVENTION: Fragments

NUMBER OF SEQUENCES: 21

CORRESPONDENCE ADDRESS: 21

ADDRESSEB: Woodcock Washburn Kurtz Mackiewicz and No. 5672472ris

STREET: One Liberty Place - 46th Ploor

GITY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cuery Match

ZIP: 30309-4530

COMPUTER READBABLE FORM:
MEDIUW TYPE: Floppy disk
COMPUTER: IBM PC COMPATIBLE
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/110,158
FILING DATE: 19930820
CLASSIFICATION NUMBER: US 07/320,408
FILING DATE: 08-MAR-1989
ATTONREY/AGENT INPOWMATION:
NAME: Pabbet, Patrea L.
REGISTRATION NUMBER: 31,284
NAME: White, John P.
REGISTRATION NUMBER: 28,678
REFERENCE/DOCKET NUMBER: 44683
TELECOMMUNICATION INFORMATION:
TELEPACK: 212-977-9550
TELEPACK: 212-977-9550
INFORMATION FOR SEQ ID NO: 13:
SEQUENCE CHARACTERISTICS:
LENGTH: 12 base palrs
TENER: nucleic acid
STRANDEDNESS: double
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TELECOMMUNICATION INFORMATION TELEPHONE: (404)-815-6508

Sequence 2; Application US/08545785
Patent No. 577013
GENERAL INPORMATION:
ABPLICANT: Embod and Rayner
TITLE OF INVENTION: And Method Of Preparation
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & No. 5770713ris LLP
STREET: One Liberty Place - 46th Floor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 13, Application US/08547214
Patent No. 2871697
GENERAL INFORMATION:
APPLICANT: Rothberg, Jonathan
APPLICANT: Deem, Michael
APPLICANT: Simpson, John
TITLE OF INVENTION: Method for the Determination and
TITLE OF INVENTION: Classification of DNA Sequences in a Sample Without
TITLE OF INVENTION: Sequencing
NUMBER OF SEQUENCES: 59
CORRESPONDENCE ADDRESS:
ADDRESSE: Pennie and Edmonds
STREET: 1155 Avenue of the Americas

Patent No. 6083693

GENERAL INFORMATION:
APPLICANT: Nandabalan, Krishnan
APPLICANT: Nandabalan, Krishnan
APPLICANT: Nathberg, Jonathan
TITLE OF INVENTION: INFERTIFICATION AND COMPARISON OF PROTEIN-PROTEIN
TITLE OF INVENTION: INFERTIFICATIONS THAT OCCUR IN POPULATIONS
FILE REFERENCE: 7934-006
CURRENT APPLICATION NUMBER: US/08/663,824
CURRENT FILING DATE: 1996-06-14
NUMBER OF SEQ ID NOS: 118
SEQ ID NO 85
LENGTH: 12

US-09-280-999-24/c

i Sequence 24, Application US/09280999

j Patent No. 6129730

GENERAL INFORMATION:

APPLICANT: REFF, Mitchell E.

ITILE OF INVENTION: IMPALRED DOMINANT SELECTABLE MARKER

ITILE OF INVENTION: SEQUENCE AND INTRONIC INSERTION STRATEGIES FOR ENHANCEMEN

ITILE OF INVENTION: SYSTEMS COMPRISING SAME

ITILE OF INVENTION: SYSTEMS COMPRISING SAME

NUMBER OF SEQUENCES: 32

CORRESPONDENCE ADDRESS:

ADDRESSEE: BURNS, DOANE, SWECKER & MATHIS

STREET: P.O. BOX 1404

CITY: Wirthia

Sequence 41, Application US/08450363

Sequence 41, Application US/08450363

Patent No. 6436434

Patent No. 6436434

APPLICANT: Salko HOSOKAWA

APPLICANT: Yoko HIRAKAWA

APPLICANT: No. 6436434 hiko ITO

APPLICANT: Nazuhiro NAGAIKE

TITLE OF INVENTION: Human Monoclonal Antibody

TITLE OF INVENTION: Specifically Binding to Surface Antigen of Cancer

TITLE OF INVENTION: Call Membrane

NUMBER OF SEQUENCES: 42
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 7.8; DB 1; Length 12;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 136, Application US/09874601

Patent No. 6632057

GENERAL INFORMATION:

APPLICANT: ELWIN, ALFRED S.

APPLICANT: GRANT: MARIA B.

TITLE OF INVENTION: THE TREATMENT OF RETINAL DISEASES

FILER REFERENCE: 4300.01410

CURRENT APPLICATION NUMBER: 09/09/874,601

CURRENT PILING DATE: 1998-04-21

PRIOR PILING DATE: 1998-04-21

PRIOR FILING DATE: 1997-06-09

PRIOR FILING DATE: 1997-06-09

PRIOR FILING DATE: 1997-04-21

PRIOR FILING DATE: 1997-04-21

NUMBER OF SEQ ID NOS: 182

SOFTWARE: PatentIn version 3.0

LENGTH: 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;
